

Bulk Sort unit with angled shelves and sorting buckets.

Monitor platform with partially open back for access to wall mounted outlets and cabling, with aluminum edge for mounting keyboard support.

Cable management gasket at base of laminate construction platform allows cable access.

Bulk Sorts and Platforms

Hamilton Sorter's Bulk Sort units are designed to hold mail sorting buckets for pre-sorting incoming or outgoing mail. Sort units are available with flat or angled shelves in desktop or freestanding units with a variety of bucket sizes.

Our platforms provide additional worksurface area for monitors and other equipment with clearance below for machines. Platforms lock into console worksurfaces and will support slide-out keyboard trays. Available in heights from 3" to 24", Hamilton platforms can also be modified to meet specific size or functional requirements.
