

SPACESAVER ART RACK DISPLAY SYSTEMS

HIGH DENSITY MOBILE STORAGE SYSTEMS FOR HANGING ART

The **NEW STEEL ART RACKS** preserve precious floor space as well as art! The new system offers greater capacity, with double-sided mesh screens that are flush to the art rack frame. Art arrangement is **LIMITLESS**...especially where floor space is not.

FEATURES

Double-faced mesh design allows galleries to hang art on both sides of the rack without interference.

The mesh is flush with the posts to allow flexibility in arrangement.

Steel construction is durable and sturdy in design.

In-rail anti-tips and roller guide bearing guidance provides for superior tracking and life-time performance.

Systems can be installed on existing floors or planned into new construction.

Powder coat painted panels and carriages protect art from off-gassing and will complement any décor. Available in all standard Spacesaver colors!

Tracks can be "nested" for maximum density.

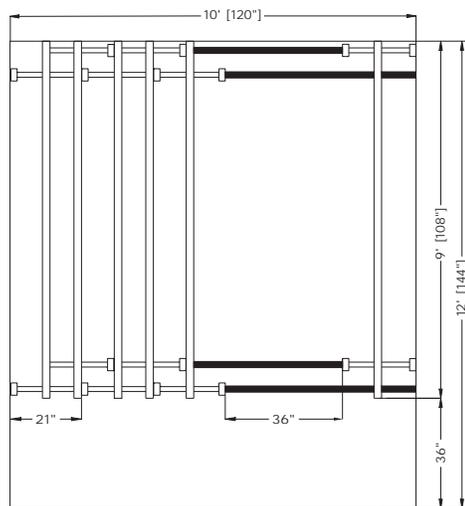

Wall Mount Panels come standard with mounting brackets and rectangular mesh screen on one side.

Face panels designed special for nested and non-nested carriages. Available with or without handles.

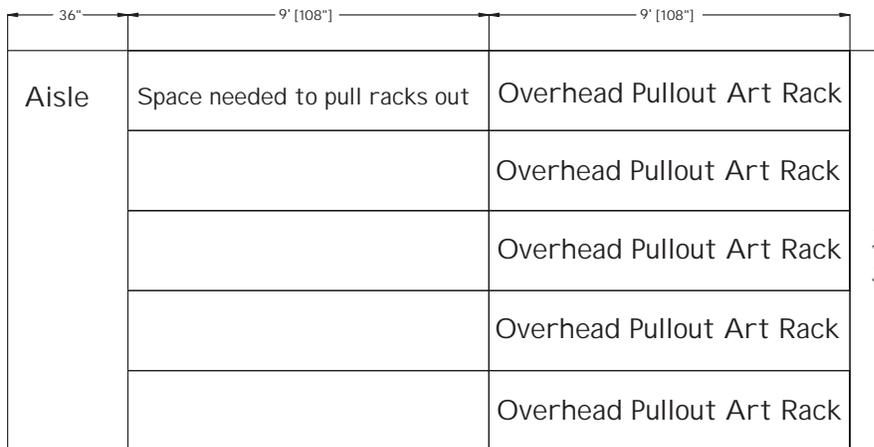

SPACESAVER MOBILE ART RACKS MAXIMIZE STORAGE DENSITY BY REQUIRING ONLY ONE ACCESS AISLE.

Spacesaver
120 sq. ft.

Overhead pullout racks require double the space of Spacesaver units.
210 sq. ft.

Spacesaver's Art Rack systems can store the same amount of materials as the pullout units in almost **HALF THE FLOOR SPACE**. This means less space is required for collection storage, or you can **DOUBLE YOUR CAPACITY** in the same area. Any way you look at it -- it's **SAVINGS** to your facility.

- Wheel sections can be nested for maximum density
- Roller guide-bearing wheel assemblies provide for superior tracking.
- All wheel sections come equipped with in-rail anti-tip.

- Double-sided wire mesh is flush with frame on both sides, offering unlimited flexibility to how art work is arranged.
- Diamond mesh available for additional charge.
