METRO CASE CARTS

The functional design of Metro Case Carts maximize usable inside space for handling storage and transport tasks efficiently. Carts can be used wherever contents must be protected from an "unclean" environment, including free-standing ambulatory care centers, surgical centers, and hospital based or out-patient surgeries.

- **Accessible:** Wire roller shelf extends out half way, easily and quietly, even at lowest level where accessibility is vital. Also available in solid or wire without roller.
- **Efficient:** Brackets, which hold shelves, attach and detach quickly from "keyhole" slots for easy shelf adjustability at 2" increments.
- **Easily Maneuverable:** Full length handles on both sides of the low profile carts and CASE-H36 allow for pushing or pulling from either end and provide better cart control. One full length handle is ergonomically located on the CASE-H24 cart.
- **Independent Caster Channel System:** A separate caster channel on each side of the cart means having to replace only one caster channel should a damaging

situation occur. With competitive models, the entire dolly would have to be replaced, given the same situation.

- **Durable:** Double-panel door construction offers better strength and minimizes maintenance. Stainless steel cabinet and optional shelves have "safety edges" to eliminate ripping of packs.
- **Cleans Easily:** Stainless steel construction makes units cart washable. Shelves and brackets remove for washing. Weep hole at the cart's front corners and underside of door panels facilitate drainage and drying.
- **High-Profile Model Available:** The high-profile models (CASE-H24, CASE-H36) save floor space, as compared to conventional case carts. The vertical design eliminates "stooping" and offers quick, easy "stand-up" access to most contents.
- **Choice of Casters:** Metro case carts are available with either stainless steel casters or maintenance free polymer casters. Both are non-corrosive and cart-washable. The polymer caster also provide a swivel lock as a standard feature.
