

WEAPONS RACK II

1. Racks are a 2-piece design, consisting of a welded frame and butt holder with a separate adjustable barrel rest. The barrel rest is painted powder-coat black and dipped in vinyl coating to protect long gun barrels. The frame is available in all Spacesaver powder coat colors.
2. Bungee cords can be ordered separately to prevent weapons from dislodging when used in mobile systems. See Weapons Rack II Accessories in the Commercial Price List.
3. Racks can stand-alone or be secured inside 4-Post and Case Shelving. Racks should be placed on a bottom shelf with a minimum depth of 10". For a complete finished look, add a plain shelf at the top of the rack. It is required that you use two (2) reinforcements per shelf when you are stacking racks.

WEAPONS RACK III

1. **Requires Spacesaver 4-Post Shelving** sections for mounting. **4-Post Shelving sold separately.**
2. Minimum 10" deep shelves/uprights needed. 10" deep shelving will support weapons with scopes or pistol grips.
NOTE: When using Hinged Doors with 10" deep 4-Post Shelving, a modification to the butt plate may be required. When using deeper shelving with Hinged Doors, no modification is necessary.
3. Available in the following widths: 30", 36", 42" & 48".

4. SWR3XX: Each Weapons Rack III Kit includes one (1) base plate [powder-coated in any standard color with black rubber stock pads] and one (1) black vinyl-coated barrel rest.
5. Barrel rest adjusts up and down in 4-Post Shelving keyhole slots to accommodate a variety of weapon lengths.
6. Can be configured for two levels of long gun storage.
7. In Mechanical Assist mobile applications, bungee cords and eyehook kits (SWR2K36 or SWR2K48) should be used.

PISTOL RACKS

1. Pistol Racks are a 2-piece design that mount directly to Spacesaver 4-Post or Case-Type shelves. The barrel and butt rests are vinyl-coated to protect handguns.
2. The complete 2-piece unit is 6" deep. The recommended minimum shelf depth, depending on the type of handgun being stored is 10". 15" deep shelves are recommended to accommodate extra long barrel lengths. When storing basically one-type of weapon, such as 9mm, place racks on 10" deep shelves and incorporate into a storage system along with the long gun weapon racks.
3. Recommended shelf spacing is 9" on center.
4. Pistol Racks should be attached to the front of the shelves so that barrels point in and can hang off the back of the shelf. NEVER position weapons so that the barrels face a person.
